

Where can people live in the world?

Population distribution across our planet is very uneven, However, there are very good reasons for this.

Imagine the box above is planet Earth. Each square in in represents 1% of land. Use the data below to colour in the squares to show just how little of the Earth's surface is habitable for humans.

- Water 70%
- Desert 6%
- Too cold 6%
- Can't grow food 5%
- Mountains 5%
- Forest 5%
- Perfect for humans! 3%
